1 Introduction

This manual describes the technical characteristics of the device and its use. It provides information on how to install, start up and configure the module.

1.1 Structure and Use of this Manual

The content of this manual is part of the hardware description of the HIMatrix programmable electronic system.

This manual is organized in the following main chapters:

- Introduction
- Safety
- Product Description
- Start-up
- Operation
- Maintenance
- Decommissioning
- Transport
- Disposal

HIMatrix remote I/Os are available for the programming tools SILworX and ELOP II Factory. Which programming tool can be used, depends on the processor operating system of the HIMatrix remote I/O, refer to the following table:

| Programming tool | Processor operating system |
|------------------|----------------------------|
| SILworX | CPU OS V7 and higher |
| ELOP II Factory | CPU OS up to V6.x |

Table 1: Programming Tools for HIMatrix Remote I/Os

In the manual, the differences are specified by using:

- Separated chapters
- Tables differentiating among the versions

i **Projects created with ELOP II Factory cannot be edited with SILworX, and vice versa!**

i Compact controllers and remote I/Os are referred to as *devices*.

Additionally, the following documents must be taken into account:

| Name | Content | Document number |
|-------------------------------------------------|------------------------------------------------------------------------------------|-----------------|
| HIMatrix System Manual Compact Systems | Hardware description of the HIMatrix compact systems | HI 800 141 E |
| HIMatrix System Manual Modular System F60 | Hardware description of the HIMatrix modular system | HI 800 191 E |
| HIMatrix Safety Manual | Safety functions of the HIMatrix system | HI 800 023 E |
| HIMatrix Safety Manual for Railway Applications | Safety functions of the HIMatrix system using the HIMatrix in railway applications | HI 800 437 E |
| SILworX Online Help | Instructions on how to use SILworX | - |
| ELOP II Factory Online Help | Instructions on how to use ELOP II Factory, Ethernet IP protocol | - |
| SILworX First Steps | Introduction to SILworX using the HIMax system as an example | HI 801 103 E |
| ELOP II Factory First Steps | Introduction to ELOP II Factory | HI 800 006 E |

Table 2: Additional Relevant Documents

The latest manuals can be downloaded from the HIMA website at www.hima.com. The revision index on the footer can be used to compare the current version of existing manuals with the Internet edition.

1.2 Target Audience

This document addresses system planners, configuration engineers, programmers of automation devices and personnel authorized to implement, operate and maintain the modules and systems. Specialized knowledge of safety-related automation systems is required.

1.3 Formatting Conventions

To ensure improved readability and comprehensibility, the following fonts are used in this document:

| | |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Bold | To highlight important parts. Names of buttons, menu functions and tabs that can be clicked and used in the programming tool. |
| <i>Italics</i> | For parameters and system variables |
| Courier | Literal user inputs |
| RUN | Operating state are designated by capitals |
| Chapter 1.2.3 | Cross references are hyperlinks even though they are not particularly marked. When the cursor hovers over a hyperlink, it changes its shape. Click the hyperlink to jump to the corresponding position. |

Safety notes and operating tips are particularly marked.

1.3.1 Safety Notes

The safety notes are represented as described below. These notes must absolutely be observed to reduce the risk to a minimum. The content is structured as follows:

- Signal word: warning, caution, notice
- Type and source of risk
- Consequences arising from non-observance
- Risk prevention

SIGNAL WORD

Type and source of risk!
Consequences arising from non-observance
Risk prevention

The signal words have the following meanings:

- Warning indicates hazardous situation which, if not avoided, could result in death or serious injury.
- Caution indicates hazardous situation which, if not avoided, could result in minor or modest injury.
- Notice indicates a hazardous situation which, if not avoided, could result in property damage.

NOTE

Type and source of damage!
Damage prevention

1.3.2 Operating Tips

Additional information is structured as presented in the following example:

i

The text corresponding to the additional information is located here.

Useful tips and tricks appear as follows:

TIP

The tip text is located here.

2 Safety

All safety information, notes and instructions specified in this document must be strictly observed. The product may only be used if all guidelines and safety instructions are adhered to.

This product is operated with SELV or PELV. No imminent risk results from the product itself. The use in Ex-zone is permitted if additional measures are taken.

2.1 Intended Use

HIMatrix components are designed for assembling safety-related controller systems.

When using the components in the HIMatrix system, comply with the following general requirements.

2.1.1 Environmental Requirements

| Requirement type | Range of values ¹⁾ |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| Protection class | Protection class III in accordance with IEC/EN 61131-2 |
| Ambient temperature | 0...+60 °C |
| Storage temperature | -40...+85 °C |
| Pollution | Pollution degree II in accordance with IEC/EN 61131-2 |
| Altitude | < 2000 m |
| Housing | Standard: IP20 |
| Supply voltage | 24 VDC |
| ¹⁾ The values specified in the technical data apply and are decisive for devices with extended environmental requirements. | |

Table 3: Environmental Requirements

Exposing the HIMatrix system to environmental conditions other than those specified in this manual can cause the HIMatrix system to malfunction.

2.1.2 ESD Protective Measures

Only personnel with knowledge of ESD protective measures may modify or extend the system or replace devices.

NOTE

Device damage due to electrostatic discharge!

- When performing the work, make sure that the workspace is free of static, and wear an ESD wrist strap.
- If not used, ensure that the device is protected from electrostatic discharge, e.g., by storing it in its packaging.

2.2 Residual Risk

No imminent risk results from a HIMatrix system itself.

Residual risk may result from:

- Faults related to engineering
- Faults related to the user program
- Faults related to the wiring

2.3 Safety Precautions

Observe all local safety requirements and use the protective equipment required on site.

2.4 Emergency Information

A HIMatrix system is a part of the safety equipment of a site. If a device or a module fails, the system enters the safe state.

In case of emergency, no action that may prevent the HIMatrix systems from operating safely is permitted.

3 Product Description

The safety-related **F3 DIO 8/8 01** remote I/O is a compact system in a metal housing with 8 digital inputs, 8 digital DO+ outputs (L- ground), 2 digital DO- outputs (S+ ground) and 2 pulsed outputs. The digital outputs DO4+, DO8+, DO4- and DO8- can also be connected as 2-pole connections.

The remote I/O is available in various model variants for SILworX and ELOP II Factory, see Table 4.

Remote I/Os are connected to individual HIMax or HIMatrix controllers via **safeethernet**. They are used to extend the I/O level, but are not able to run any user program by themselves.

The remote I/O is suitable for mounting in Ex-zone 2, see Chapter 4.1.5.

The device is TÜV-certified for safety-related applications up to SIL 3 (IEC 61508, IEC 61511 and IEC 62061), Cat. 4 and PL e (EN ISO 13849-1) and SIL 4 (EN 50126, EN 50128 and EN 50129).

Further safety standards, application standards and test standards are specified in the certificates available on the HIMA website.

3.1 Safety Function

The remote I/O is equipped with safety-related digital inputs and outputs. The input values on the inputs are safely transmitted to the connected controller via **safeethernet**. The outputs are safely assigned their values by the connected controller via **safeethernet**.

3.1.1 Safety-Related Digital Inputs

The remote I/O is equipped with 8 digital inputs. The state (HIGH, LOW) of each input is signaled by an individual LED.

Mechanical contacts without own power supply or signal power source can be connected to the inputs. Potential-free mechanical contacts without own power supply are fed via an internal short-circuit-proof 24 V power source (LS+). Each of them supply a group of 4 mechanical contacts. Figure 1 shows how the connection is performed.

With signal voltage sources, the corresponding ground must be connected to the input (L-), see Figure 1.

Figure 1: Connections to Safety-Related Digital Inputs

For the external wiring and the connection of sensors, apply the de-energized-to-trip principle. Thus, if a fault occurs, the input signals adopt a de-energized, safe state (low level).

If an external wire is not monitored, an open-circuit is considered as safe low level.

3.1.1.1 Reaction in the Event of a Fault

If the device detects a fault on a digital input, the user program processes a low level in accordance with the de-energized to trip principle.

The device activates the *FAULT* LED.

In addition to the channel signal value, the user program must also consider the corresponding error code.

The error code allows the user to configure additional fault reactions in the user program.

3.1.1.2 Line Control

Line control is used to detect short-circuits or open-circuits and can be configured for the remote I/O, e.g., on EMERGENCY STOP inputs complying with Cat. 4 and PL e in accordance with EN ISO 13849-1.

To this end, connect the digital outputs TO 1 through TO 2 of the system to the digital inputs DI of the same system as follows:

Figure 2: Line Control

The remote I/O pulses the pulsed outputs to detect short-circuits and open-circuits on the lines connected to the digital inputs. To do so, configure the *Value [BOOL]* -> system variable in SILworX or the *DO[01].Value* system signal in ELOP II Factory. The variables for the pulsed outputs must begin with channel 1 and reside in direct sequence, one after the other.

If the following faults occur, the *FAULT* LED located on the front plate of the device blinks, the inputs are set to low level and an (evaluable) error code is created:

- Cross-circuit between two parallel wires.
- Invalid connections of two lines (e.g., TO 2 to DI 3),
- Earth fault on one wire (with earthed ground only).
- Open-circuit or open contacts, i.e., including when one of the two EMERGENCY STOP switches mentioned above has been engaged, the *FAULT* LED blinks and the error code is created.

3.1.2 Safety-Related Digital Outputs

The remote I/O is equipped with 8 digital outputs DO+ (ground L-) and 2 digital outputs DO- (ground S+). The state (HIGH, LOW) of each output is signaled by an individual LED (HIGH, LOW).

At the maximum ambient temperature, the DO+ outputs 1...3 and 5...7 can be loaded with 0.5 A each, and DO+ outputs 4 and 8 can be loaded with 1 A or with 2 A at an ambient temperature of up to 40 °C.

At the maximum ambient temperature, the DO- outputs 4- and 8- can be loaded with 1 A each or with 2 A at an ambient temperature of up to 40 °C.

Within a temperature range of 60...70 °C, all outputs of the F3 DIO 8/8 014 can be loaded with 0.5 A, see Table 15.

The digital outputs DO4+, DO8+, DO4- and DO8- can be connected as one-pole or 2-pole switching connections. The remaining outputs are only set up for one-pole switching connections.

With 1-pole switching outputs, ensure that the system's L- ground from the corresponding channel group is used for the DO+ outputs and the system's S+ ground is used for the DO- outputs, see Table 18. The S+ ground is limited by the system to a maximum current of 8 A and obtained from the 24 V voltage connection.

The external wire of an output is not monitored, however, a detected short-circuit is signaled.

With 2-pole switching outputs, the L+ switching output DO4+ must be connected to the L- switching output DO4- and the L+ switching output DO8+ to the L- switching output DO8-. This type of connection must be set via the *DO2[xx].2-pole* system parameter.

Figure 3: Connection to the 2-Pole Switching Outputs (DO-, DO+)

3.1.2.1 Line Diagnosis

During 2-pole operation, a line diagnosis is performed to detect potential external short-circuits to L+ and L-. Time on delay is required to detect external short-circuits with an inductive or capacitive load or a lamp load. This delay can be configured using the *Time on delay* system parameter. In the range of 0...30 ms, the value can be set in steps of 1 ms.

i

Initial values must be set for all relevant system parameters of the line diagnosis (*DO2[xx].2-Pole, Time on delay*).

Therefore, first set all required system parameters in the programming tool, then compile the user program, and finally, transfer the program to the controller.

The settings for the system parameters configured for line diagnosis cannot be changed during operation!

An external open-circuit will not be detected.

Figure 4: Connection of Actuators to Outputs

The redundant connection of two outputs must be decoupled with diodes. Only 1-pole switching outputs may be connected redundantly.

⚠ CAUTION

For connecting a load to a one-pole switching output, use the corresponding L- ground of the respective channel group (2-pole connection) to ensure that the internal protective circuit can function.

3.1.2.2 Reaction in the Event of a Fault

If the device detects a faulty signal on a digital output, the affected module output is set to the safe (de-energized) state using the safety switches.

If a device fault occurs, all digital outputs are switched off.

In both cases, the device activates the *FAULT* LED.

The error code allows the user to configure additional fault reactions in the user program.

3.1.3 Pulsed Outputs

The 2 digital pulsed outputs can be used to detect short-circuits and open-circuits on digital inputs, e.g., on EMERGENCY STOP button complying with Cat. 4 and PL e in accordance with EN ISO 13849-1.

Pulsed outputs must not be used as safety-related outputs (e.g., for activating safety-related actuators)!

3.2 Equipment, Scope of Delivery

The following table specifies the available remote I/O variants:

| Designation | Description |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| F3 DIO 8/8 01 | Remote I/O (8 digital inputs, 8 digital outputs, 2 pulsed outputs), Operating temperature: 0...+60 °C, for ELOP II Factory programming tool |
| F3 DIO 8/8 014 | Remote I/O (8 digital inputs, 8 digital outputs, 2 pulsed outputs), Operating temperature: -25...+70 °C (temperature class T1), Vibration and shock tested according to EN 50125-3 and EN 50155, class 1B according to IEC 61373, for ELOP II Factory programming tool |
| F3 DIO 8/8 01 SILworX | Remote I/O (8 digital inputs, 8 digital outputs, 2 pulsed outputs), Operating temperature: 0...+60 °C, for SILworX programming tool |
| F3 DIO 8/8 014 SILworX | Remote I/O (8 digital inputs, 8 digital outputs, 2 pulsed outputs), Operating temperature: -25...+70 °C (temperature class T1), Vibration and shock tested according to EN 50125-3 and EN 50155, class 1B according to IEC 61373, for SILworX programming tool |

Table 4: Available Variants

3.2.1 IP Address and System ID (SRS)

A transparent label is delivered with the device to allow one to note the IP address and the system ID (SRS for system rack slot) after a change.

IP ____ . ____ . ____ . ____ SRS ____ . ____ . ____

Default value for IP address: 192.168.0.99
 Default value for SRS: 60 000.200.0 (SILworX)
 60 000.0.0 (ELOP II Factory)

The label must be affixed such that the ventilation slots in the housing are not obstructed.

Refer to the First Steps manual of the programming tool for more information on how to modify the IP address and the system ID.

3.3 Type Label

The type plate contains the following details:

- Product name
- Bar code (1D or 2D code)
- Part no.
- Production year
- Hardware revision index (HW Rev.)
- Firmware revision index (FW Rev.)
- Operating voltage
- Mark of conformity

Figure 5: Sample Type Label

3.4 Assembly

This chapter describes the layout and function of the remote I/Os, and their communication via safeethernet.

Figure 6: Front View

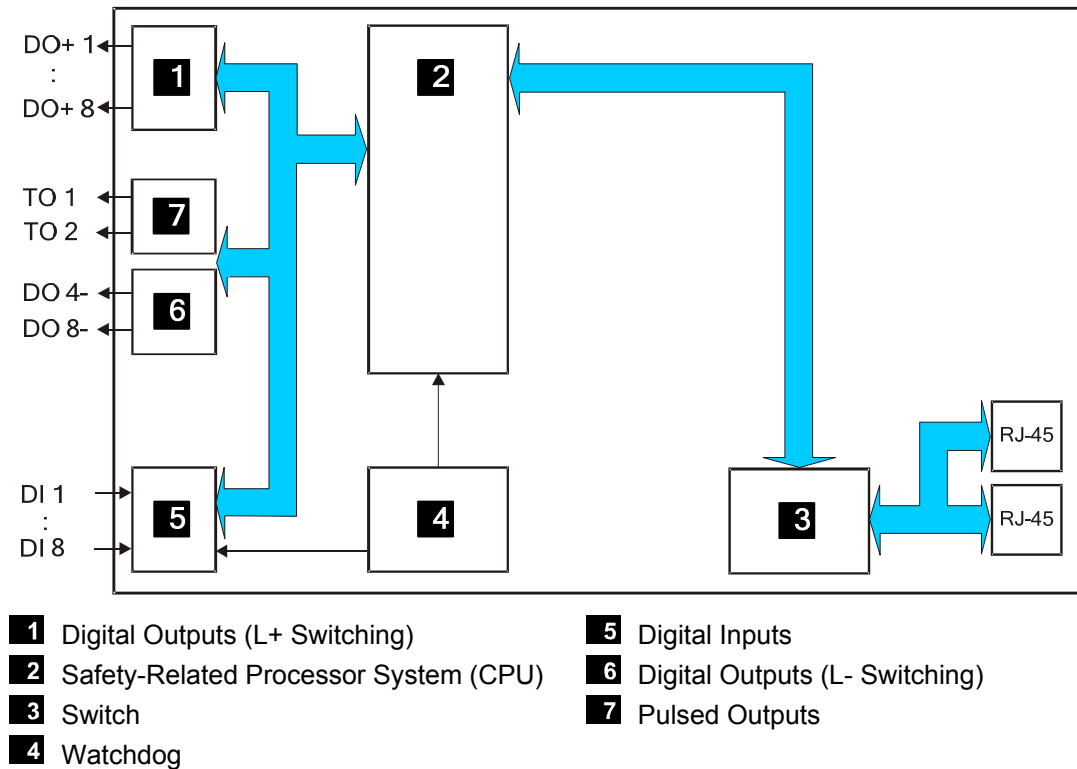

Figure 7: Block Diagram

3.4.1 LED Indicators

The light-emitting diodes (LEDs) indicate the operating state of the remote I/O. The LEDs are classified as follows:

- Operating voltage LED
- System LEDs
- Communication LEDs
- I/O LEDs

3.4.1.1 Operating Voltage LED

| LED | Color | Status | Description |
|--------|-------|--------|----------------------------------|
| 24 VDC | Green | On | 24 VDC operating voltage present |
| | | Off | No operating voltage |

Table 5: Operating Voltage LED

3.4.1.2 System LEDs

While the system is being booted, all LEDs are lit simultaneously.

| LED | Color | Status | Description |
|-------|--------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RUN | Green | On | Device in RUN, normal operation |
| | | Blinking | Device in STOP A new operating system is being loaded. |
| | | Off | The device is not in the RUN state. |
| ERROR | Red | On | The device is in the ERROR STOP state. Internal fault detected by self-tests, e.g., hardware faults or cycle time overrun. The processor system can only be restarted with a command from the PADT (reboot). |
| | | Blinking | If ERROR blinks and all others LEDs are lit simultaneously, the boot loader has detected an operating system fault in the flash memory and waits for a new operating system to be loaded. |
| | | Off | No faults detected. |
| PROG | Yellow | On | A new configuration is being loaded into the device. |
| | | Blinking | The device switches from INIT to STOP A new operating system is being loaded into the flash ROM. |
| | | Off | No configuration or operating system is being loaded. |
| FORCE | Yellow | Off | The FORCE LED of a remote I/O is not functioning. The FORCE LED of the associated controller serves to signal the forcing of a remote I/O. |
| FAULT | Yellow | On | The loaded configuration is not valid. The new operating system is corrupted (after OS download). |
| | | Blinking | Fault while loading a new operating system One or multiple I/O faults occurred. |
| | | Off | None of the described faults occurred. |
| OSL | Yellow | Blinking | Operating system emergency loader active. |
| | | Off | Operating system emergency loader inactive. |
| BL | Yellow | Blinking | OS and OSL binary defective or hardware fault, INIT_FAIL. |
| | | Off | None of the described faults occurred. |

Table 6: System LEDs

3.4.1.3 Communication LEDs

All RJ-45 connectors are provided with a small green and a yellow LEDs. The LEDs signal the following states:

| LED | Status | Description |
|--------|----------|-------------------------------------|
| Green | On | Full duplex operation |
| | Blinking | Collision |
| | Off | Half duplex operation, no collision |
| Yellow | On | Connection available |
| | Blinking | Interface activity |
| | Off | No connection available |

Table 7: Ethernet Indicators

3.4.1.4 I/O LEDs

| LED | Color | Status | Description |
|-----------------|--------|--------|------------------------------------------------|
| DI 1...8 | Yellow | On | The related input is active (energized). |
| | | Off | The related input is inactive (de-energized). |
| TO 1, TO 2 | Yellow | On | Pulsed output activated. |
| | | Off | Pulsed output deactivated. |
| DO 1...8 | Yellow | On | The related output is active (energized). |
| | | Off | The related output is inactive (de-energized). |
| DO 4-, DO 8- | Yellow | On | The related output is active (energized). |
| | | Off | The related output is inactive (de-energized). |

Table 8: I/O LEDs

3.4.2 Communication

The remote I/O communicates with the associated controller via **safeethernet**.

3.4.2.1 Connections for Ethernet Communication

| Property | Description |
|-----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Port | 2 x RJ-45 |
| Transfer standard | 10BASE-T/100BASE-Tx, half and full duplex |
| Auto negotiation | Yes |
| Auto crossover | Yes |
| IP address | Freely configurable ¹⁾ |
| Subnet mask | Freely configurable ¹⁾ |
| Supported protocols | <ul style="list-style-type: none"> ▪ Safety-related: safeethernet ▪ Standard protocols: Programming and debugging tool (PADT), SNTP |
| ¹⁾ The general rules for assigning IP address and subnet masks must be adhered to. | |

Table 9: Ethernet Interfaces Properties

The two RJ-45 connectors with integrated LEDs are located on the bottom left-hand side of the housing. Refer to Chapter 3.4.1.3 for a description of the LEDs' function.

The connection parameters are read based on the MAC address (media access control address) defined during manufacturing.

The MAC address for the remote I/O is specified on a label located above the two RJ-45 connectors (1 and 2).

Figure 8: Sample MAC Address Label

The remote I/O is equipped with an integrated switch for Ethernet communication. For further information on the integrated switch and **safeethernet**, refer to Chapter *Communication* of the system manual for compact systems (HI 800 141 E).

3.4.2.2 Network Ports Used for Ethernet Communication

| UDP ports | Use |
|-----------|----------------------------------------------------------------------------------|
| 8000 | Programming and operation with the programming tool |
| 8001 | Configuration of the remote I/O using the PES (ELOP II Factory) |
| 8004 | Configuration of the remote I/O using the PES (SILworX) |
| 6010 | safeethernet |
| 123 | SNTP (time synchronization between PES and remote I/O, PES and external devices) |

Table 10: Network Ports in Use

3.4.3 Reset Key

The remote I/O is equipped with a reset key. The key is only required if the user name or password for administrator access is not known. If only the IP address set for the remote I/O does not match the PADT (PC), the connection can be established with a `Route add` entry on the PC.

i

Only the model variants without protective lacquer are equipped with a reset key.

The key can be accessed through a small round hole located approximately 5 cm from the upper left-hand side of the housing. The key is engaged using a suitable pin made of insulating material to avoid short-circuits within the remote I/O.

The reset is only effective if the remote I/O is rebooted (switched off and on) while the key is simultaneously engaged for at least 20 s. Engaging the key during operation has no effect.

Properties and behavior of the remote I/O after a reboot with engaged reset key:

- Connection parameters (IP address and system ID) are set to the default values.
- All accounts are deactivated except for the *administrator* default account with empty password.

After a new reboot without the reset key engaged, the connection parameters (IP address and system ID) and accounts become effective.

- Those configured by the user.
- Those valid prior to rebooting with the reset key engaged, if no changes were performed.

3.5 Product Data

| General | |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| Response time | ≥ 10 ms |
| Ethernet interfaces | 2 x RJ-45, 10BASE-T/100BASE-Tx with integrated switch |
| Operating voltage | 24 VDC, -15...+20 %, $r_{PP} \leq 15\%$, from a power supply unit with safe insulation in accordance with IEC 61131-2 |
| Current input | max. 8 A (with maximum load) Idle: approx. 0.4 A at 24 V |
| Fuse (external) | 10 A time-lag (T) |
| Back-up battery | None |
| Operating temperature | 0...+60 °C |
| Storage temperature | -40...+85 °C |
| Type of protection | IP20 |
| Max. dimensions (without plug) | Width: 152 mm (with housing screws) Height: 114 mm (with fixing bolt) Depth: 66 mm (with earthing screw) |
| Weight | approx. 1 kg |

Table 11: Product Data

| Digital inputs | |
|---------------------|--------------------------------------------------|
| Number of inputs | 8 (non-galvanically separated) |
| High level: Voltage | 15...30 VDC |
| Current input | ≥ 2 mA at 15 V |
| Low level: Voltage | max. 5 VDC |
| Current input | max. 1.5 mA (1 mA at 5 V) |
| Switching point | typ. 7.5 V |
| Supply | 2 x 20 V / 100 mA (at 24 V), short-circuit-proof |

Table 12: Specifications for Digital Inputs

| Digital outputs (DO+ and DO-) | | | | | | | |
|----------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|----------------|---------|-----|------------|-----|

Table 16: Certificates

4 Start-up

To start up the remote I/O, it must be mounted, connected and configured in the programming tool.

4.1 Installation and Mounting

The remote I/O is mounted on a 35 mm DIN rail such as described in the HIMatrix system manual for compact systems.

When laying cables (long cables, in particular), take appropriate measures to avoid interference, e.g., by separating the signal lines from the power lines.

When dimensioning the cables, ensure that their electrical properties have no negative impact on the measuring circuit.

4.1.1 Connecting the Digital Inputs

Use the following terminals to connect the digital inputs:

| Terminal | Designation | Function (inputs) |
|----------|-------------|-----------------------------------|
| 19 | LS+ | Sensor supply of the inputs 1...4 |
| 20 | 1 | Digital input 1 |
| 21 | 2 | Digital input 2 |
| 22 | 3 | Digital input 3 |
| 23 | 4 | Digital input 4 |
| 24 | L- | Ground |
| Terminal | Designation | Function (inputs) |
| 25 | LS+ | Sensor supply of the inputs 5...8 |
| 26 | 5 | Digital input 5 |
| 27 | 6 | Digital input 6 |
| 28 | 7 | Digital input 7 |
| 29 | 8 | Digital input 8 |
| 30 | L- | Ground |

Table 17: Terminal Assignment for the Digital Inputs

4.1.1.1 Surges on Digital Inputs

Due to the short cycle time of the HIMatrix systems, a surge pulse as described in EN 61000-4-5 can be read in to the digital inputs as a short-term high level.

The following measures ensure proper operation in environments where surges may occur:

1. Install shielded input wires
2. Program noise blanking in the user program. A signal must be present for at least two cycles before it is evaluated. The fault reaction is triggered with a corresponding delay.

i

The measures specified above are not necessary if the plant design precludes surges from occurring within the system.

In particular, the design must include protective measures with respect to overvoltage, lightning, earth grounding and plant wiring in accordance with the relevant standards and the instructions specified in the system manual (HI 800 141 E or HI 800 191 E).

4.1.2 Connecting the Digital Outputs

Use the following terminals to connect the digital outputs:

| Terminal | Designation | Function (outputs, DO) |
|----------|-------------|----------------------------------------|
| 4 | 4- | Digital output 4- (for increased load) |
| 5 | 8- | Digital output 8- (for increased load) |
| 6 | S+ | Ground channel group |
| Terminal | Designation | Function (outputs, DO+) |
| 7 | L- | Ground channel group |
| 8 | 1 | Digital output 1 |
| 9 | 2 | Digital output 2 |
| 10 | 3 | Digital output 3 |
| 11 | 4+ | Digital output 4+ (for increased load) |
| 12 | L- | Ground channel group |
| Terminal | Designation | Function (outputs, DO+) |
| 13 | L- | Ground channel group |
| 14 | 5 | Digital output 5 |
| 15 | 6 | Digital output 6 |
| 16 | 7 | Digital output 7 |
| 17 | 8+ | Digital output 8+ (for increased load) |
| 18 | L- | Ground channel group |

Table 18: Terminal Assignment for the Digital Outputs

4.1.3 Connecting Pulsed Outputs

| Terminal | Designation | Function (non-safe pulsed outputs TO) |
|----------|-------------|---------------------------------------|
| 1 | L- | Ground |
| 2 | 1 | Pulsed output 1 |
| 3 | 2 | Pulsed output 2 |

Table 19: Terminal Assignment for the Pulsed Outputs

4.1.4 Cable Plugs

Cable plugs attached to the pin headers of the devices are used to connect to the power supply and to the field zone. The cable plugs are included within the scope of delivery of the HIMatrix devices and modules.

The devices power supply connections feature the following properties:

| Connection to the power supply | |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Cable plugs | four poles, screw terminals |
| Wire cross-section | 0.2...2.5 mm ² (single-wire) 0.2...2.5 mm ² (finely stranded) 0.2...2.5 mm ² (with wire end ferrule) |
| Stripping length | 10 mm |
| Screwdriver | Slotted 0.6 x 3.5 mm |
| Tightening torque | 0.4...0.5 Nm |

Table 20: Power Supply Cable Plug Properties

| Connection to the field zone | |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Number of cable plugs | 5 pieces, six poles, screw terminals |
| Wire cross-section | 0.2...1.5 mm ² (single-wire) 0.2...1.5 mm ² (finely stranded) 0.2...1.5 mm ² (with wire end ferrule) |
| Stripping length | 6 mm |
| Screwdriver | Slotted 0.4 x 2.5 mm |
| Tightening torque | 0.2...0.25 Nm |

Table 21: Input and Output Cable Plug Properties

4.1.5 Mounting the F3 DIO 8/8 01 in Zone 2

(EC Directive 94/9/EC, ATEX)

The remote I/O is suitable for mounting in zone 2. Refer to the corresponding declaration of conformity available on the HIMA website.

When mounting the device, observe the special conditions specified in the following section.

Specific Conditions X

1. Mount the remote I/O in an enclosure that meets the EN 60079-15 requirements and achieves a type of protection of at least IP54, in accordance with EN 60529. Provide the enclosure with the following label:

Work is only permitted in the de-energized state

Exception:

If a potentially explosive atmosphere has been precluded, work can also be performed when the controller is under voltage.

2. The enclosure in use must be able to safely dissipate the generated heat. Depending on the output load and supply voltage, the HIMatrix F3 DIO 8/8 01 has a power dissipation ranging between 9 W and 27 W.
3. Protect the HIMatrix F3 DIO 8/8 01 with a 10 A time-lag fuse. The 24 VDC power must come from a power supply unit with safe isolation. Use power supply units of type PELV or SELV only.
4. Applicable standards:

| | |
|------------------------|--------------------------|
| VDE 0170/0171 Part 16, | DIN EN 60079-15: 2004-5 |
| VDE 0165 Part 1, | DIN EN 60079-14: 1998-08 |

Pay particular attention to the following sections:

DIN EN 60079-15:

| | |
|------------|----------------------------|
| Chapter 5 | Design |
| Chapter 6 | Terminals and cabling |
| Chapter 7 | Air and creeping distances |
| Chapter 14 | Connectors |

DIN EN 60079-14:

| | |
|---------------|-----------------------------|
| Chapter 5.2.3 | Equipment for use in zone 2 |
| Chapter 9.3 | Cabling for zones 1 and 2 |
| Chapter 12.2 | Equipment for zones 1 and 2 |

The remote I/O is additionally equipped with the label represented below:

Figure 9: Label for Ex Conditions

4.2 Configuration

The remote I/O can be configured using a programming tool, SILworX or ELOP II Factory. Which programming tool should be used, depends on the revision status of the operating system (firmware):

- SILworX is required for CPU OS V7 and higher.
- ELOP II Factory is required for CPU OS up to V6.x.

How to switch between operating systems is described in Chapter *Loading Operating Systems* of the system manual for compact systems (HI 800 141 E).

4.3 Configuration with SILworX

In the Hardware Editor, the remote I/Os are represented like a base plate equipped with the following modules:

- Processor module (CPU)
- Input module (DI 8 LC) with Line Control
- Output module (DO 2 02)
- Output module (DO 2 01)

Double-click the module to open the Detail View with the corresponding tabs. The tabs are used to assign the global variables configured in the user program to the system variables of the corresponding module.

4.3.1 Parameters and Error Codes for the Inputs and Outputs

The following tables specify the system parameters that can be read and set for the inputs and outputs, including the corresponding error codes.

In the user program, the error codes can be read using the variables assigned within the logic.

The error codes can also be displayed in SILworX.

4.3.2 Digital Inputs of F3 DIO 8/8 01

The following tables present the statuses and parameters for the input module (DI 8 LC) in the same order as given in the Hardware Editor.

4.3.2.1 Tab **Module**

The **Module** tab contains the following system parameters:

| System parameter | Data type | R/W | Description | |
|-------------------------------------------------------------|-----------|-----|-------------------------------------------------------------------------------|-----------------------------------------------------------------|
| DI Number of Pulsed Channels | USINT | W | Number of pulsed outputs (supply outputs) | |
| | | | Coding | Description |
| | | | 0 | No pulsed output planned for SC/OC ¹⁾ detection |
| | | | 1 | Pulsed output 1 planned for SC/OC ¹⁾ detection |
| | | | 2 | Pulsed output 1 and 2 planned for SC/OC ¹⁾ detection |
| | | | Pulsed outputs must not be used as safety-related outputs! | |
| DI Pulse Slot | UDINT | W | Pulse module slot (SC/OC ¹⁾ detection), set the value to 3 | |
| DI Pulse Delay [µs] | UINT | W | Waiting time for line control (detection of short-circuits or cross-circuits) | |
| DI.Error Code | WORD | R | Error codes for all digital inputs | |
| | | | Coding | Description |
| | | | 0x0001 | Fault within the digital inputs |
| | | | 0x0002 | FTT test of test pattern faulty |
| Module Error Code | WORD | R | Module error code | |
| | | | Coding | Description |
| | | | 0x0000 | I/O processing, if required with errors see other error codes |
| | | | 0x0001 | No I/O processing (CPU not in RUN) |
| | | | 0x0002 | No I/O processing during the booting test |
| | | | 0x0004 | Manufacturer interface operating |
| | | | 0x0010 | No I/O processing: invalid configuration |
| | | | 0x0020 | No I/O processing: fault rate exceeded |
| | | | 0x0040/ 0x0080 | No I/O processing: configured module not plugged in |
| Module SRS | [UDINT] | R | Slot number (System Rack Slot) | |
| Module Type | [UINT] | R | Type of module, target value: 0x00A5 [165 _{dec}] | |
| ¹⁾ SC/OC (SC = short-circuit, OC = open-circuit) | | | | |

Table 22: SILworX - System Parameters for Digital Inputs, **Module** Tab

4.3.2.2 Tab **DO 8 LC: Channels**

The **DI 8 LC: Channels** tab contains the following system parameters.

| System parameter | Data type | R/W | Description | | | | | | | | |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|-------------|------|-----------------------------------|------|------------------------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| -> Error Code [BYTE] | BYTE | R | Error codes for the digital input channels <table border="1" data-bbox="667 421 1433 698"> <thead> <tr> <th>Coding</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0x01</td> <td>Fault in the digital input module</td> </tr> <tr> <td>0x10</td> <td>Short-circuit of the channel</td> </tr> <tr> <td>0x80</td> <td>Intermittence between pulsed output TO and digital input DI, e.g., <ul style="list-style-type: none"> ▪ Open-circuit ▪ Open switch ▪ L+ undervoltage </td> </tr> </tbody> </table> | Coding | Description | 0x01 | Fault in the digital input module | 0x10 | Short-circuit of the channel | 0x80 | Intermittence between pulsed output TO and digital input DI, e.g., <ul style="list-style-type: none"> ▪ Open-circuit ▪ Open switch ▪ L+ undervoltage |
| Coding | Description | | | | | | | | | | |
| 0x01 | Fault in the digital input module | | | | | | | | | | |
| 0x10 | Short-circuit of the channel | | | | | | | | | | |
| 0x80 | Intermittence between pulsed output TO and digital input DI, e.g., <ul style="list-style-type: none"> ▪ Open-circuit ▪ Open switch ▪ L+ undervoltage | | | | | | | | | | |
| -> Value [BOOL] | BOOL | R | Input values for the digital input channels 0 = input de-energized 1 = input energized | | | | | | | | |
| Pulsed Output [USINT] -> | USINT | W | Source channel for pulsed supply <table border="1" data-bbox="667 840 1433 985"> <thead> <tr> <th>Coding</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Input channel</td> </tr> <tr> <td>1</td> <td>Pulse of the 1st TO channel</td> </tr> <tr> <td>2</td> <td>Pulse of the 2nd TO channel</td> </tr> </tbody> </table> | Coding | Description | 0 | Input channel | 1 | Pulse of the 1st TO channel | 2 | Pulse of the 2nd TO channel |
| Coding | Description | | | | | | | | | | |
| 0 | Input channel | | | | | | | | | | |
| 1 | Pulse of the 1st TO channel | | | | | | | | | | |
| 2 | Pulse of the 2nd TO channel | | | | | | | | | | |

Table 23: SILworX - System Parameters for Digital Inputs, **DI 8 LC: Channels** Tab

4.3.3 Digital Outputs of F3 DIO 8/8 01: DO 2 02

The following tables present the statuses and parameters for the output module (DO 2 02) in the same order as given in the Hardware Editor.

4.3.3.1 Tab **Module**

The **Module** tab contains the following system parameters:

| System parameter | Data type | R/W | Description | |
|-------------------|-----------------------------------------------------------|-----|-------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| DO1.Error Code | WORD | R | Error codes for all digital outputs | |
| | | | Coding | Description |
| | | | 0x0001 | Fault within the digital outputs |
| | | | 0x0002 | Test of safety shutdown returns a fault |
| | | | 0x0004 | Test of auxiliary voltage returns a fault |
| | | | 0x0008 | FTT test of test pattern faulty |
| | | | 0x0010 | Output switch test pattern faulty |
| | | | 0x0020 | Output switch test pattern (shutdown test of the outputs) faulty |
| | | | 0x0040 | Active shutdown via WD faulty |
| | | | 0x0200 | All outputs are switched off, total current exceeded |
| | | | 0x0400 | FTT test: 1st temperature threshold exceeded |
| | | | 0x0800 | FTT test: 2nd temperature threshold exceeded |
| 0x1000 | FTT test: Monitoring of auxiliary voltage 1: Undervoltage | | | |
| DO2.Error Code | WORD | R | see <i>DO1.Error Code</i> | |
| Time on delay | UINT | W | Time on delay for 2-pole tests due to line capacities, inductive and capacitive load, range 0...30 ms, 1 ms steps | |
| Module Error Code | WORD | R | Module error code | |
| | | | Coding | Description |
| | | | 0x0000 | I/O processing, if required with errors, see other error codes |
| | | | 0x0001 | No I/O processing (CPU not in RUN) |
| | | | 0x0002 | No I/O processing during the booting test |
| | | | 0x0004 | Manufacturer interface operating |
| | | | 0x0010 | No I/O processing: invalid configuration |
| | | | 0x0020 | No I/O processing: fault rate exceeded |
| 0x0040/ 0x0080 | No I/O processing: configured module not plugged in | | | |
| Module SRS | UDINT | R | Slot number (System Rack Slot) | |
| Module Type | UINT | R | Type of module, target value: 0x00B4 [180 _{dec}] | |

Table 24: SILworX - System Parameters for Digital Outputs DO 2 02, **Module** Tab

4.3.3.2 Tab **DO 2 02: DO1 Channels**

The **DO 2 02: DO1 Channels** tab contains the following system parameters.

| System parameter | Data type | R/W | Description | | | | | | | | | | | | | | |
|----------------------|--------------------------------------------------------------------------------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|-------------|------|------------------------------------|------|----------------------------------|------|----------------------------------------------|------|------------------------------------------------------------|------|--------------------------------------------------------------------------------|------|-------------------------------------------------------------------|

| 0x80 | Channel is switched off due to fault on the corresponding channel | | | | | | | | | | | | | | | | |
| Value [BOOL] -> | BOOL | W | Output value for DO channels: 1 = output energized 0 = output de-energized | | | | | | | | | | | | | | |
| 2-pole [BOOL] -> | UINT | W | Configuration for a 2-Pole channel 1 = DO2[01] and DO1[04] are used as a 2-pole channel or DO2[02] and DO1[08] are used as a 2-pole channel 0 = DO2[xx] is not used as a 2-pole channel. | | | | | | | | | | | | | | |

Table 26: SILworX - System Parameters for Digital Outputs, **DO 2 02: DO2 Channels** Tab

4.3.4 Digital Outputs of F3 DIO 8/8 01: DO 2 01

The following tables present the statuses and parameters for the output module (DO 2 01) in the same order as given in the Hardware Editor.

4.3.4.1 Tab **Module**

The **Module** tab contains the following system parameters:

| System parameter | Data type | R/W | Description | | | | | | | | | | | | | | | | | | | | | | | | |
|-------------------|-----------------------------------------------------------|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|-------------|--------|----------------------------------------------------------------|--------|-----------------------------------------|--------|-------------------------------------------|--------|----------------------------------|--------|------------------------------------------|--------|------------------------------------------------------------------|-------------------|-----------------------------------------------------|--------|------------------------------------------------------|--------|----------------------------------------------|--------|----------------------------------------------|--------|-----------------------------------------------------------|
| DO.Error Code | WORD | R | Error codes for all digital outputs | | | | | | | | | | | | | | | | | | | | | | | | |
| | | | <table border="1"> <thead> <tr> <th>Coding</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0x0001</td> <td>Fault within the digital outputs</td> </tr> <tr> <td>0x0002</td> <td>Test of safety shutdown returns a fault</td> </tr> <tr> <td>0x0004</td> <td>Test of auxiliary voltage returns a fault</td> </tr> <tr> <td>0x0008</td> <td>FTT test of test pattern faulty</td> </tr> <tr> <td>0x0010</td> <td>Output switch test pattern faulty</td> </tr> <tr> <td>0x0020</td> <td>Output switch test pattern (shutdown test of the outputs) faulty</td> </tr> <tr> <td>0x0040</td> <td>Active shutdown via WD faulty</td> </tr> <tr> <td>0x0200</td> <td>All outputs are switched off, total current exceeded</td> </tr> <tr> <td>0x0400</td> <td>FTT test: 1st temperature threshold exceeded</td> </tr> <tr> <td>0x0800</td> <td>FTT test: 2nd temperature threshold exceeded</td> </tr> <tr> <td>0x1000</td> <td>FTT test: Monitoring of auxiliary voltage 1: Undervoltage</td> </tr> </tbody> </table> | Coding | Description | 0x0001 | Fault within the digital outputs | 0x0002 | Test of safety shutdown returns a fault | 0x0004 | Test of auxiliary voltage returns a fault | 0x0008 | FTT test of test pattern faulty | 0x0010 | Output switch test pattern faulty | 0x0020 | Output switch test pattern (shutdown test of the outputs) faulty | 0x0040 | Active shutdown via WD faulty | 0x0200 | All outputs are switched off, total current exceeded | 0x0400 | FTT test: 1st temperature threshold exceeded | 0x0800 | FTT test: 2nd temperature threshold exceeded | 0x1000 | FTT test: Monitoring of auxiliary voltage 1: Undervoltage |
| | | | Coding | Description | | | | | | | | | | | | | | | | | | | | | | | |

Table 27: SILworX - System Parameters for Digital Outputs DO 2 01, **Module** Tab

4.3.4.2 Tab **DO 2 01: DO1 Channels**

The **DO 2 01: DO1 Channels** tab contains the following system parameters:

| System parameter | Data type | R/W | Description | | | | | | | | | | | | | | |
|----------------------|--------------------------------------------------------------------------------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|-------------|------|------------------------------------|------|----------------------------------|------|----------------------------------------------|------|------------------------------------------------------------|------|--------------------------------------------------------------------------------|------|-------------------------------------------------------------------|
| Channel no. | --- | R | Channel number, defined by default | | | | | | | | | | | | | | |
| -> Error Code [BYTE] | BYTE | R | Error codes for the digital output channels <table border="1" data-bbox="676 389 1434 741"> <thead> <tr> <th>Coding</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0x01</td> <td>Fault in the digital output module</td> </tr> <tr> <td>0x02</td> <td>Channel shutdown due to overload</td> </tr> <tr> <td>0x04</td> <td>Error while reading back the digital outputs</td> </tr> <tr> <td>0x08</td> <td>Error while reading back the status of the digital outputs</td> </tr> <tr> <td>0x40</td> <td>External short-circuit or short-circuit of the EMC protection returns an error</td> </tr> <tr> <td>0x80</td> <td>Channel is switched off due to fault on the corresponding channel</td> </tr> </tbody> </table> | Coding | Description | 0x01 | Fault in the digital output module | 0x02 | Channel shutdown due to overload | 0x04 | Error while reading back the digital outputs | 0x08 | Error while reading back the status of the digital outputs | 0x40 | External short-circuit or short-circuit of the EMC protection returns an error | 0x80 | Channel is switched off due to fault on the corresponding channel |
| Coding | Description | | | | | | | | | | | | | | | | |
| 0x01 | Fault in the digital output module | | | | | | | | | | | | | | | | |
| 0x02 | Channel shutdown due to overload | | | | | | | | | | | | | | | | |
| 0x04 | Error while reading back the digital outputs | | | | | | | | | | | | | | | | |
| 0x08 | Error while reading back the status of the digital outputs | | | | | | | | | | | | | | | | |
| 0x40 | External short-circuit or short-circuit of the EMC protection returns an error | | | | | | | | | | | | | | | | |
| 0x80 | Channel is switched off due to fault on the corresponding channel | | | | | | | | | | | | | | | | |
| Value [BOOL] -> | BOOL | W | Output value for DO channels: 1 = output energized 0 = output de-energized | | | | | | | | | | | | | | |

Table 28: SILworX - System Parameters for Digital Outputs, **DO 2 01: DO1 Channels** Tab

4.4 Configuration with ELOP II Factory

4.4.1 Configuring the Inputs and Outputs

The signals previously defined in the Signal Editor (Hardware Management) are assigned to the individual channels (inputs and outputs) using ELOP II Factory. Refer to the system manual for compact systems or the online help for more details.

The following chapter describes the system signals used for assigning signals in the remote I/O.

4.4.2 Signals and Error Codes for the Inputs and Outputs

The following tables specify the signals that can be read and set for the inputs and outputs, including the corresponding error codes.

In the user program, the error codes can be read using the signals assigned within the logic.

The error codes can also be displayed in ELOP II Factory.

4.4.3 Digital Inputs of F3 DIO 8/8 01

| System Signal | R/W | Description | | | | | | | | | | | | | | | | |
|-------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|-------------|--------|------------------------------------------------------------------|--------|-----------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----------------------------------|--------|------------------------------------------|--------|----------------------------------------|-------------------|-----------------------------------------------------|
| Mod.SRS [UDINT] | R | Slot number (System Rack Slot) | | | | | | | | | | | | | | | | |
| Mod. Type [UINT] | R | Type of module, target value: 0x00A5 [165 _{dec}] | | | | | | | | | | | | | | | | |
| Mod. Error Code [WORD] | R | Module error code | | | | | | | | | | | | | | | | |
| | | <table border="1"> <thead> <tr> <th>Coding</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0x0000</td> <td>I/O processing, if required with errors see other error codes</td> </tr> <tr> <td>0x0001</td> <td>No I/O processing (CPU not in RUN)</td> </tr> <tr> <td>0x0002</td> <td>No I/O processing during the booting test</td> </tr> <tr> <td>0x0004</td> <td>Manufacturer interface operating</td> </tr> <tr> <td>0x0010</td> <td>No I/O processing: invalid configuration</td> </tr> <tr> <td>0x0020</td> <td>No I/O processing: fault rate exceeded</td> </tr> <tr> <td>0x0040/ 0x0080</td> <td>No I/O processing: configured module not plugged in</td> </tr> </tbody> </table> | Coding | Description | 0x0000 | I/O processing, if required with errors see other error codes | 0x0001 | No I/O processing (CPU not in RUN) | 0x0002 | No I/O processing during the booting test | 0x0004 | Manufacturer interface operating | 0x0010 | No I/O processing: invalid configuration | 0x0020 | No I/O processing: fault rate exceeded | 0x0040/ 0x0080 | No I/O processing: configured module not plugged in |

| Coding | Description | | | | | | | | | | | | | | | | | |
| 0x0001 | Error of the TO unit as a whole: | | | | | | | | | | | | | | | | | |
| DO[xx].Error Code [BYTE] | R | Error code of the individual digital pulsed output channels: | | | | | | | | | | | | | | | | |
| | | <table border="1"> <thead> <tr> <th>Coding</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0x01</td> <td>Fault in the digital output module</td> </tr> </tbody> </table> | Coding | Description | 0x01 | Fault in the digital output module | | | | | | | | | | | | |
| Coding | Description | | | | | | | | | | | | | | | | | |
| 0x01 | Fault in the digital output module | | | | | | | | | | | | | | | | | |
| DO[xx].Value [BOOL] | W | Output value for TO channels: 1 = output energized 0 = output de-energized Pulsed outputs must not be used as safety-related outputs! | | | | | | | | | | | | | | | | |

Table 31: ELOP II Factory - System Signals for the Pulsed Outputs

5 Operation

The remote I/O can only operated together with a controller. No specific monitoring is required for remote I/Os.

5.1 Handling

Handling of the remote I/O during operation is not required.

5.2 Diagnosis

A first diagnosis results from evaluating the LEDs, see Chapter 3.4.1.

The device diagnostic history can also be read using the programming tool.

6 Maintenance

No maintenance measures are required during normal operation.

If a failure occurs, the defective module or device must be replaced with a module or device of the same type or with a replacement model approved by HIMA.

Only the manufacturer is authorized to repair the device/module.

6.1 Faults

Refer to Chapter 3.1.1.1, for more information on the fault reaction of digital inputs.

Refer to Chapter 3.1.2.2, for more information on the fault reaction of digital outputs.

If the test harnesses detect safety-critical faults, the module enters the STOP_INVALID state and will remain in this state. This means that the input signals are no longer processed by the device and the outputs switch to the de-energized, safe state. The evaluation of diagnostics provides information on the fault cause.

6.2 Maintenance Measures

The following measures are required for the device:

- Loading the operating system, if a new version is required
- Executing the proof test

6.2.1 Loading the Operating System

HIMA is continuously improving the operating system of the devices. HIMA recommends to use system downtimes to load a current version of the operating system into the devices.

Refer to the release list to check the consequences of the new operation system version on the system!

The operating system is loaded using the programming tool.

Prior to loading the operating system, the device must be in STOP (displayed in the programming tool). Otherwise, stop the device.

For more information, refer to the programming tool documentation.

6.2.2 Proof Test

HIMatrix devices and modules must be subjected to a proof test in intervals of 10 years. For more information, refer to the safety manual (HI 800 023 E).

7 Decommissioning

Remove the supply voltage to decommission the device. Afterwards pull out the pluggable screw terminal connector blocks for inputs and outputs and the Ethernet cables.

8 Transport

To avoid mechanical damage, HIMatrix components must be transported in packaging.

Always store HIMatrix components in their original product packaging. This packaging also provides protection against electrostatic discharge. Note that the product packaging alone is not suitable for transport.

9 Disposal

Industrial customers are responsible for correctly disposing of decommissioned HIMatrix hardware. Upon request, a disposal agreement can be arranged with HIMA.

All materials must be disposed of in an ecologically sound manner.

Appendix

Glossary

| Term | Description |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ARP | Address resolution protocol: Network protocol for assigning the network addresses to hardware addresses |
| AI | Analog input |
| AO | Analog output |
| COM | Communication module |
| CRC | Cyclic redundancy check |
| DI | Digital input |
| DO | Digital output |
| ELOP II Factory | Programming tool for HIMatrix systems |
| EMC | Electromagnetic compatibility |
| EN | European norm |
| ESD | Electrostatic discharge |
| FB | Fieldbus |
| FBD | Function block diagrams |
| FTT | Fault tolerance time |
| ICMP | Internet control message protocol: Network protocol for status or error messages |
| IEC | International electrotechnical commission |
| MAC address | Media access control address: Hardware address of one network connection |
| PADT | Programming and debugging tool (in accordance with IEC 61131-3), PC with SILworX or ELOP II Factory |
| PE | Protective earth |
| PELV | Protective extra low voltage |
| PES | Programmable electronic system |
| R | Read: The system variable or signal provides value, e.g., to the user program |
| Rack ID | Base plate identification (number) |
| Interference-free | Supposing that two input circuits are connected to the same source (e.g., a transmitter). An input circuit is termed <i>interference-free</i> if it does not distort the signals of the other input circuit. |
| R/W | Read/Write (column title for system variable/signal type) |
| SELV | Safety extra low voltage |
| SFF | Safe failure fraction, portion of faults that can be safely controlled |
| SIL | Safety integrity level (in accordance with IEC 61508) |
| SILworX | Programming tool for HIMatrix systems |
| SNTP | Simple network time protocol (RFC 1769) |
| SRS | System.rack.slot addressing of a module |
| SW | Software |
| TMO | Timeout |
| W | Write: System variable/signal is provided with value, e.g., from the user program |
| r_{PP} | Peak-to-peak value of a total AC component |
| Watchdog (WD) | Time monitoring for modules or programs. If the watchdog time is exceeded, the module or program enters the ERROR STOP state. |
| WDT | Watchdog time |
